

## Requirements

You have to develop and design a cookie banner. The screen shows a cookie banner design with accordions and toggles. You have to integrate the screen with an API. The API details are added below. This task reflects a similar task you would have at Secure Privacy :)

## Screenshot

<https://share.getcloudapp.com/Blu5nnYz>

## Technologies to be used for the test

Angular 7+

Bootstrap

HTML

CSS

Typescript

## API details

This is a Get API that will fetch you the notifications. Implement this API inside that page and bind it to the proper structure.

TYPE- GET

URL - <https://fast-lowlands-95849.herokuapp.com/api/common/getBanner>

AUTHENTICATION - NO AUTHENTICATION REQUIRED

## Timeline

Please send it over within 4 days.

## Expectations

To successfully complete this exercise you have to:

- Design the page according to the look and feel of the screenshot. PSD will not be provided, so get it as close as possible.
- Strong focus on UX and CSS
- You have to successfully integrate the API in the app
- Best practice coding structure and use of standard best practices
- Make the UI accessible for non-developer to review

## Submission of test

On completion of the task, please upload the code on git and send code til git + UI to test to [dan@secureprivacy.ai](mailto:dan@secureprivacy.ai) and [manish@secureprivacy.ai](mailto:manish@secureprivacy.ai)

Thank you and best of luck!
